

AERATORI

VB 40

VB 40

A very effective petrol scarifier for professional use.

The use of a scarifier is an effective way to remove moss but also to create a vigorous and healthy lawn. With the scarifier you cut narrow vertical holes into the lawn allowing oxygen and humidity to penetrate the roots. The verticalcutter also cuts the roots of the lawnroots which creates new grass-seeds.

The scarifier is easy to use. Just set the height so that the blades go deep enough and drive. VB 40 is equipped with 28 fixed blades of hardened steel. It is also practical to transport with collapsible handle with quick release.

The motor is easy-to-start, clean and silent and produce 5,5 hp.
